Swine Enteric Coronavirus Disease (SECD) Situation Report – Feb 12, 2015

Information current as of 12:00 pm MDT, 02/11/2015

This report provides information on confirmed SECD-infected premises and SECD laboratory testing results data reported to USDA since the Federal Order was initiated on June 5, 2014. USDA-APHIS-VS veterinary officials confirm SECD-infected premises according to the official case definition. These reports are available on the USDA Web site at www.aphis.usda.gov/animal-health/secd. The Web site provides additional SECD information, including reports on SECD laboratory testing prior to the Federal Order.

SECD Positive Premises

Table 1. SECD Positive Premises This Week and Cumulative since June 5, 2014

NEW THIS WEEK (FEB 1 – 7, 2015)	PEDV	PDCOV	DUAL INFECTION ^a
New Confirmed Positive Premises This Week	49	4	2
New Presumptive Positive Premises This Week	12	0	0
CURRENT PREMISES WITH SECD POSITIVE STATUS	PEDV	PDCOV	DUAL INFECTION ^a
Total Premises with Confirmed Positive Status This Week	834	36	27
CUMULATIVE SINCE JUNE 5, 2014 ^b	PEDV	PDCOV	DUAL INFECTION ^a
Confirmed Positive Premises	858	41	27
Presumptive Positive Premises	393	26	26
Confirmed Positive Premises that have Attained Negative Status (i.e., premises that changed from positive to negative status) ^c	23	5	1

^aDual infection indicates premises with both PEDV and PDCoV

^bCumulative data includes current premises with positive status and premises that were positive but have acquired negative status

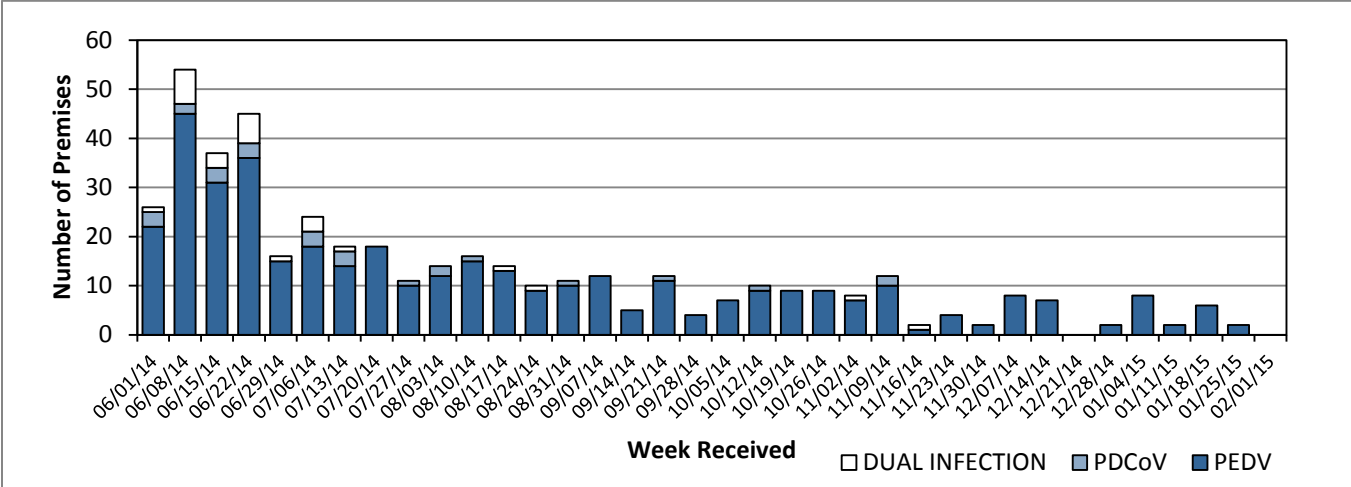

^cSee Notes section of this report for details about premises statuses

Figure 1. Number of Confirmed Positive Premises by Week ^a

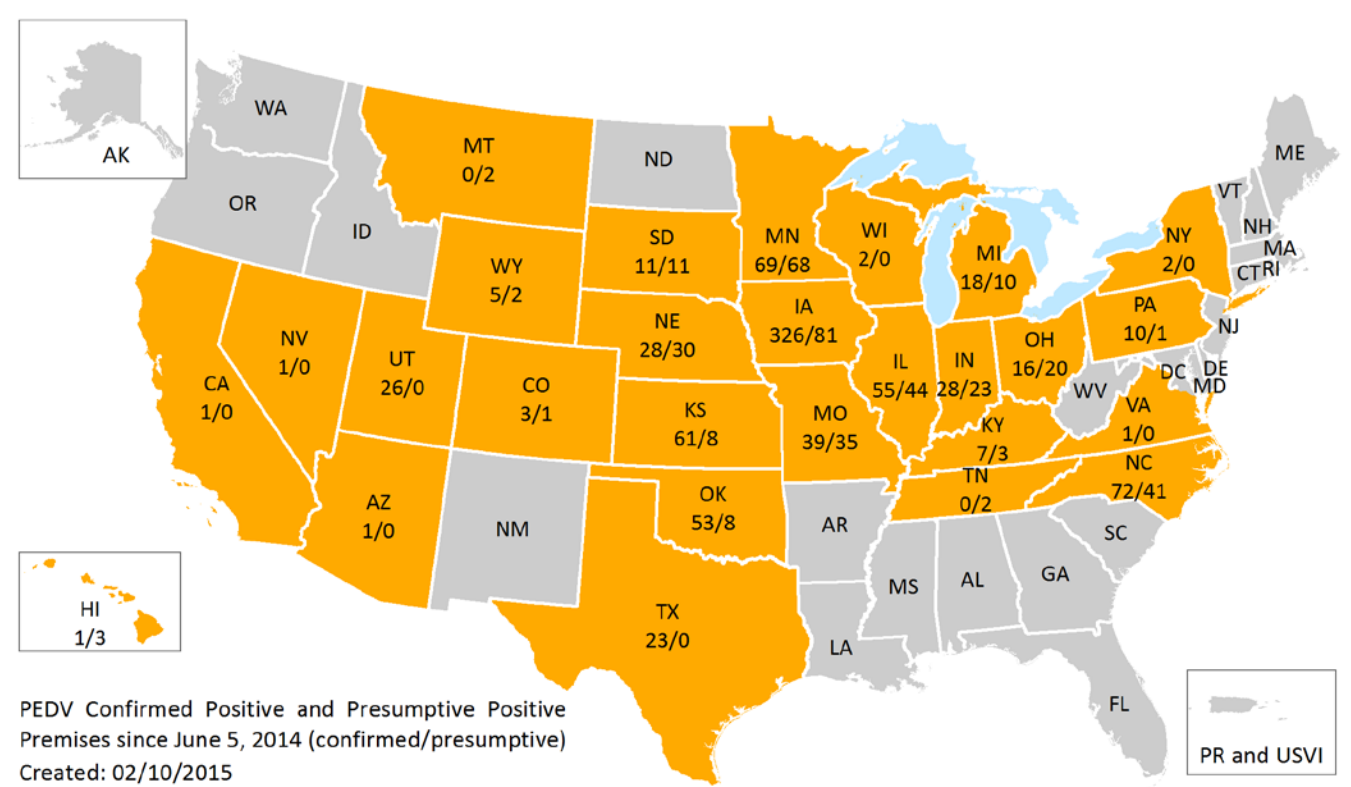

^aWeek the sample was received at the laboratory for testing

Figure 2. Number of Presumptive Positive Premises by Week ^a

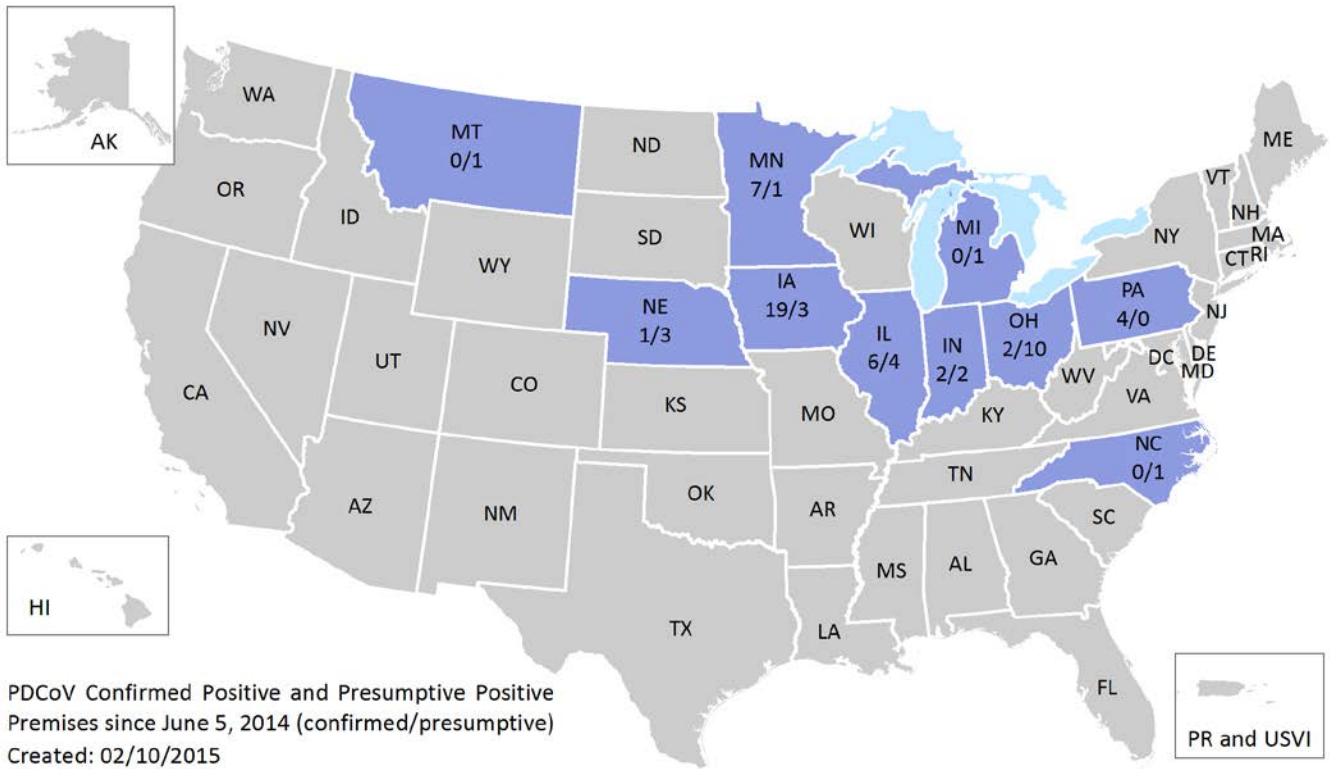

^aWeek the sample was received at the laboratory for testing

Map 1. PEDV: Cumulative Confirmed and Presumptive PEDV Positive Premises since June 5, 2014

PEDV Confirmed Positive and Presumptive Positive Premises since June 5, 2014 (confirmed/presumptive)
Created: 02/10/2015

Map 2. PDCoV: Cumulative Confirmed and Presumptive PDCoV Positive Premises since June 5, 2014

Map 3. Dual Infection: Cumulative Confirmed and Presumptive Positive Premises with Both PEDV and PDCoV since June 5, 2014

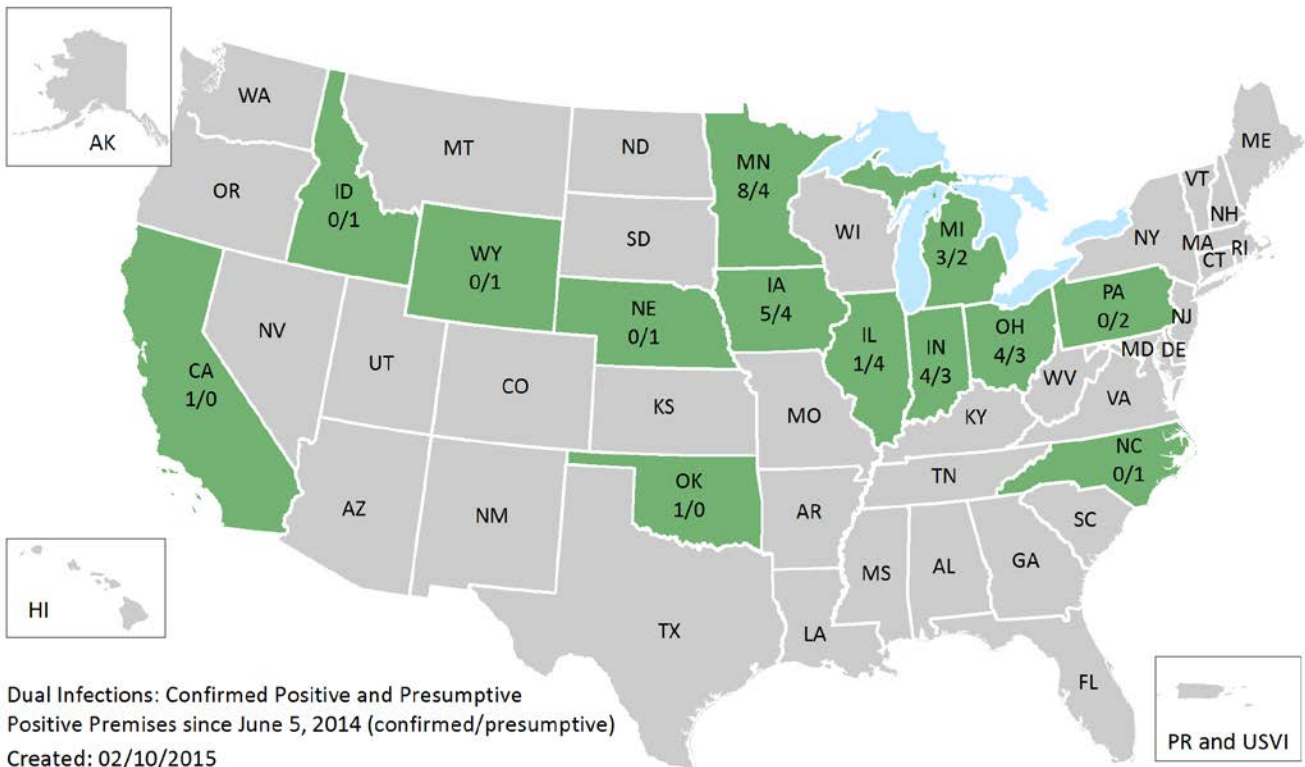

Table 2. Number of SECD Confirmed and Presumptive Positive Premises in Each Production Class, by Month^a
(includes PEDV, PDCoV, and Dual Infections) (confirmed/presumptive)

^aFrom April through October 2013, number of cases tested was not reported and calculation of 'Percent Positive' was not possible.

^bNAHLN Laboratories started sharing PDCoV testing results with VS on March 23, 2014.

^cFor pre-FO data, month refers to the month the sample was tested; after the FO, month refers to the month when the sample was received at the laboratory for testing

^dSamples in an individual laboratory accession may be tested in subsequent months (e.g., at the start and end of the month), causing an individual accession to be counted in two months

^aWeek the sample was received at the laboratory for testing; weeks are not listed if there were no positive accessions for that week.

^bFor SECD laboratory testing data, the State is the collection site State that was reported by the laboratory to USDA.

^cSamples in an individual laboratory accession may be tested in subsequent weeks (at the start and end of the week), causing an individual accession to be counted in two weeks. For this reason, Totals in Table 8 may be slightly higher than Totals in Table 6.

Table 9. PDCoV Positive Laboratory Accessions by Week^a and State^b

Notes About Data Used in This Report

- This report is posted on the USDA SECD Web site (www.aphis.usda.gov/animal-health/secd). This Web site also provides information on SECD laboratory testing prior to the Federal Order (April 2013 - June 2014), and information on SECD reporting, case definitions, herd plans, vaccines, and the Federal response.
- Dual infection indicates a premises that is positive for both PEDV and PDCoV.
- Premises statuses are assigned in accordance with the Novel Swine Enteric Coronavirus Disease Case Definition (available online at www.aphis.usda.gov/animal-health/secd). A confirmed positive premises is a premises where pigs tested positive and have clinical signs. A presumptive positive premises is a premises where pigs tested positive but have non-specific, unknown, or no clinical signs consistent with SECD. Please see the official SECD Case Definition for more information (www.aphis.usda.gov/animal-health/secd)
- Some positive premises may have a change in their type of positive status over time. For example, with the onset of clinical signs, a presumptive positive premises may be reclassified to a confirmed positive premises. Or PEDV positive premises may be re-classified to a dual infection status with the laboratory diagnosis of PDCoV. Therefore, the number of cumulative positive statuses will be slightly more than the sum of the number of current positive statuses and positive statuses reclassified as negative (see Table 1).
- Table 1 describes premises that are confirmed “this week;” this refers to premises that were investigated and determined to be presumptive or confirmed according to SECD case definition criteria during the current report week. Data presented in Tables 2-4 and Figures 1-2 provide epidemiologic trends, and data are presented based on the week the specimen was received by the testing laboratory.
- In general, a laboratory accession is a set of samples collected at a single premises on a single day and submitted to the laboratory. A single herd or premises may be tested multiple times, and the same herd or premises may be represented in a large number of laboratory accessions. Because a single premises may repeatedly be represented in subsequent lab accessions, fluctuations in the lab accession data in this report do not accurately depict epidemiologic trends. The number of confirmed or presumptive positive premises provided in the first section of this report are better epidemiologic indicators.
- Laboratory accession data in this report includes only PCR results from testing on biological samples; testing on environmental or feed samples is not included.
- In the laboratory accession section of this report, State is the Collection State reported by the testing laboratory to USDA; State of origin data provided by laboratories is not verified by USDA. However, USDA staff verifies the locations of premises associated with positive laboratory accessions and they are reported in the premises section of this report.
- NAHLN laboratories that have reported SECD testing data to the USDA APHIS VS since June 5, 2014, include: Arkansas Livestock & Poultry Commission Laboratory; University of Georgia, Athens; University of Illinois Veterinary Diagnostic Laboratory; Illinois Department of Agriculture, Galesburg Animal Disease Laboratory; Iowa State University Veterinary Diagnostic Laboratory; Kansas State Veterinary Diagnostic Laboratory; Michigan State University Diagnostic Center for Population and Animal Health; University of Minnesota Veterinary Diagnostic Laboratory; Missouri Department of Agriculture Veterinary Diagnostic Laboratory; University of Nebraska Veterinary Diagnostic Center; Rollins Diagnostic Laboratory, North Carolina Department of Agriculture; North Dakota State University Veterinary Diagnostic Laboratory; Ohio Animal Disease Diagnostic Laboratory – Ohio Department of Agriculture; Oregon State University Veterinary Diagnostic Laboratory; Indiana Animal Disease Diagnostic Laboratory at Purdue University; Animal Disease Research & Diagnostic Laboratory - South Dakota State University; and Texas Veterinary Medical Diagnostic Laboratory. Data in this report does not include testing data from private diagnostic laboratories or testing data for research projects.

- Data summaries provided in this report reflect the most current and complete data available at the time of report preparation; summaries in this report may differ from those provided in past reports.
